

# `href-ul`: L<sup>A</sup>T<sub>E</sub>X Package That Makes Underscored Links

Yegor Bugayenko

0.1.0 2021/06/13

This package helps you make your hyperlinks underscored:

```
\documentclass{article}
\usepackage{href-ul}
\begin{document}
Go to \href{https://google.com}{Google!}
\end{document}
```

Changing the color of the text also changes the color of the line.

Changing the size of the text doesn't change the width of the line.

The package uses `hyperref` and `ulem` packages.

More details about this package you can find in the `yegor256/href-ul` GitHub repository.
